ukrinfosystems.com.ua

Ukrainian infosystems LLC is one of the leading telecommunications companies in Ukraine.

Core areas of activity of the company — system and project integration, IT services and outsourcing, development, implementation, and support of software-hardware and telecommunication solutions, in-house production of computer and server equipment, as well as development of various types of software.

We offer the best technical solutions in the fields of networking, computing, communication technologies, and security systems that meet the highest standards of reliability, manageability, and scalability.

Gleit is a solution designed for areas with restricted access. It provides security management with convenient access and extended capabilities for managers and security personnel.

Orchestrating security systems in a unified environment

Modern security demands require full integration of all components into a unified system.

The **Gleit** system is designed to integrate various security systems and orchestrate their operation. This provides:

- flexible enforcement of “business rules” across all security systems;
- comprehensive access control and management;
- centralized management of security incidents and patrol operations.

Gleit unlocks new capabilities for perimeter protection, zone patrolling, and monitoring hard-to-reach areas.

The screenshot displays the Gleit website interface. At the top, the Gleit logo is on the left, and navigation links for Home, Product, and Support are in the center. On the right, there is a 'Request a consultation' button and a language selector set to 'UA'. The main content area features a section titled 'Solutions for restricted access areas' with a subtext 'Security management with convenient access and advanced capabilities for managers and security services' and another 'Request a consultation' button. To the right of this text is an image of a security monitor displaying multiple camera feeds. Below this, a section titled 'Our advantages' lists three key features: 'Intelligent integration' (highlighting event presentation and system value), 'Information interactions' (providing interaction details for various roles), and 'Alert system' (offering rapid delivery and wide coverage). Our advantages

Intelligent integration

The system highlights and presents to users events from diverse security devices and information systems (access control, video surveillance, video analytics, databases, etc.).

Increases the value of existing specialized systems through integration and coordinated work between them.

Information interactions

The system provides information interactions between users of one or more control nodes:

- Corporate Security Office
- Pass Bureau
- Perimeter Checkpoints
- Heads of departments and employees who have guest passes/entries to the Organization's territory.

Alert system

The built-in alert and information system includes providing the organization's specialized personnel with the conditions for intelligent and timely decision-making through:

- Rapid information delivery
- Wide coverage
- Situation analysis
- Proactive influence

Gleit: key system features

- enables information exchange across control nodes (security operations center, pass office) and perimeter checkpoints (gates, access points);
 - offers a streamlined tool for issuing guest passes and access permits;
 - intelligently aggregates and displays events from disparate security devices and systems (access control, video surveillance, analytics, databases, etc.), enhancing the value of your existing infrastructure;
 - **Gleit** includes a built-in notification system tailored to stakeholder access rights.
-

Access pass management at the enterprise and on the territory.

Visitor Application №45

Information

Application submitted by

Select territory	4 Oleny Telihy St.	Select access point	Office
Visit date	2025-06-21	Visitor's full name	Anton Savchenko
Visitor's passport		Visitor's vehicle	EE1234EE
Visitor's phone number		Visitor's organization	
Select purpose of visit		Comment on the visit	
Select accompanying person		Position of accompanying person	
Select organization		Select the department to visit	

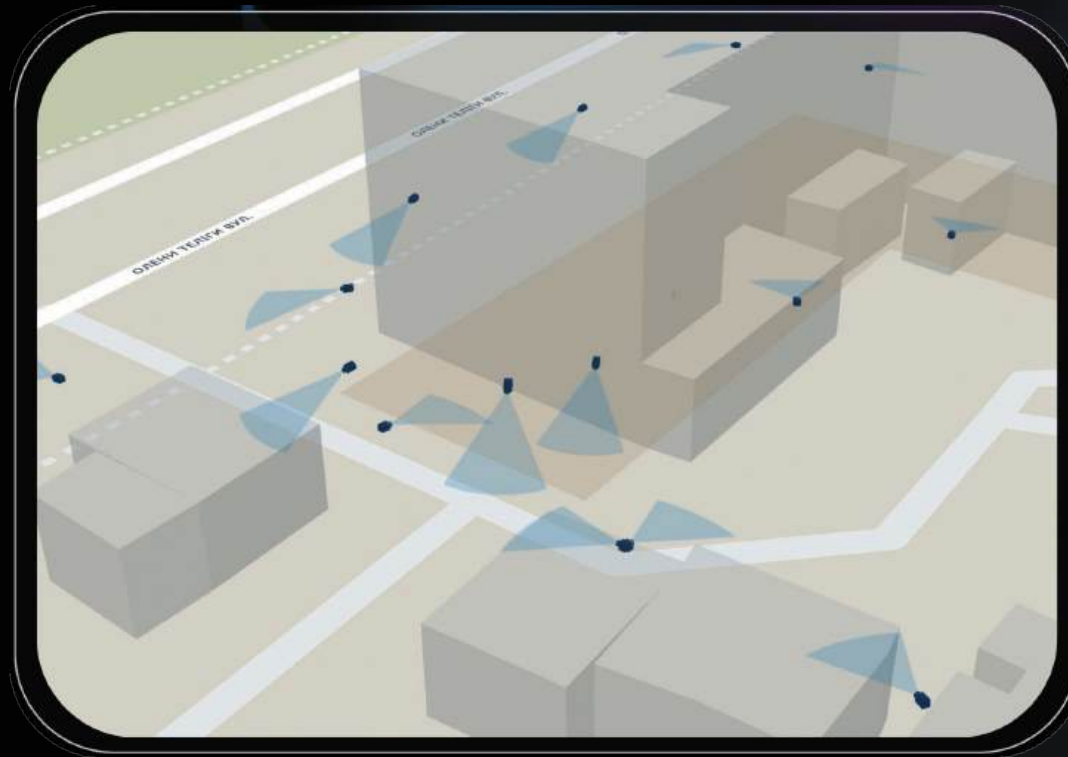

Gleit

As a top-level integrating system, Gleit:

- is primarily targeted at department heads and security personnel;
- provides user-specific data access from multiple heterogeneous security systems via a unified interface;
- accessible via a standard web browser within the organization's internal network;
- offers a mobile app for secure, real-time event notifications, request approvals, and report viewing;

- enables role-based grouping of devices with configurable access controls;
- allows importing of site plans and visualization of device locations;
- enables rapid, real-time incident management across the facility.

System integration capabilities

Gleit has an open architecture and supports deep-level integration with the following types of systems:

- 01** Security alarm systems
(*Satel, InnerRange, etc.*)
- 02** Fire alarm systems (*Satel, Siemens, etc.*)
- 03** Access control systems
(*Suprema, InnerRange, U-prox*)
- 04** Perimeter security systems
(*InnerRange, etc.*)
- 05** VMS systems (*Milestone, Hikcentral, LuxRiot, etc.*)
- 06** Video analytics systems
(*Incoresoft, Herta, etc.*)

Remote area monitoring

Enables safe and efficient inspection of hard-to-reach or critical areas. These tasks can be labor-intensive and resource-heavy. However, system integration enables automated, real-time monitoring. This reduces the need for on-site personnel in hazardous areas and ensures operational oversight of infrastructure.

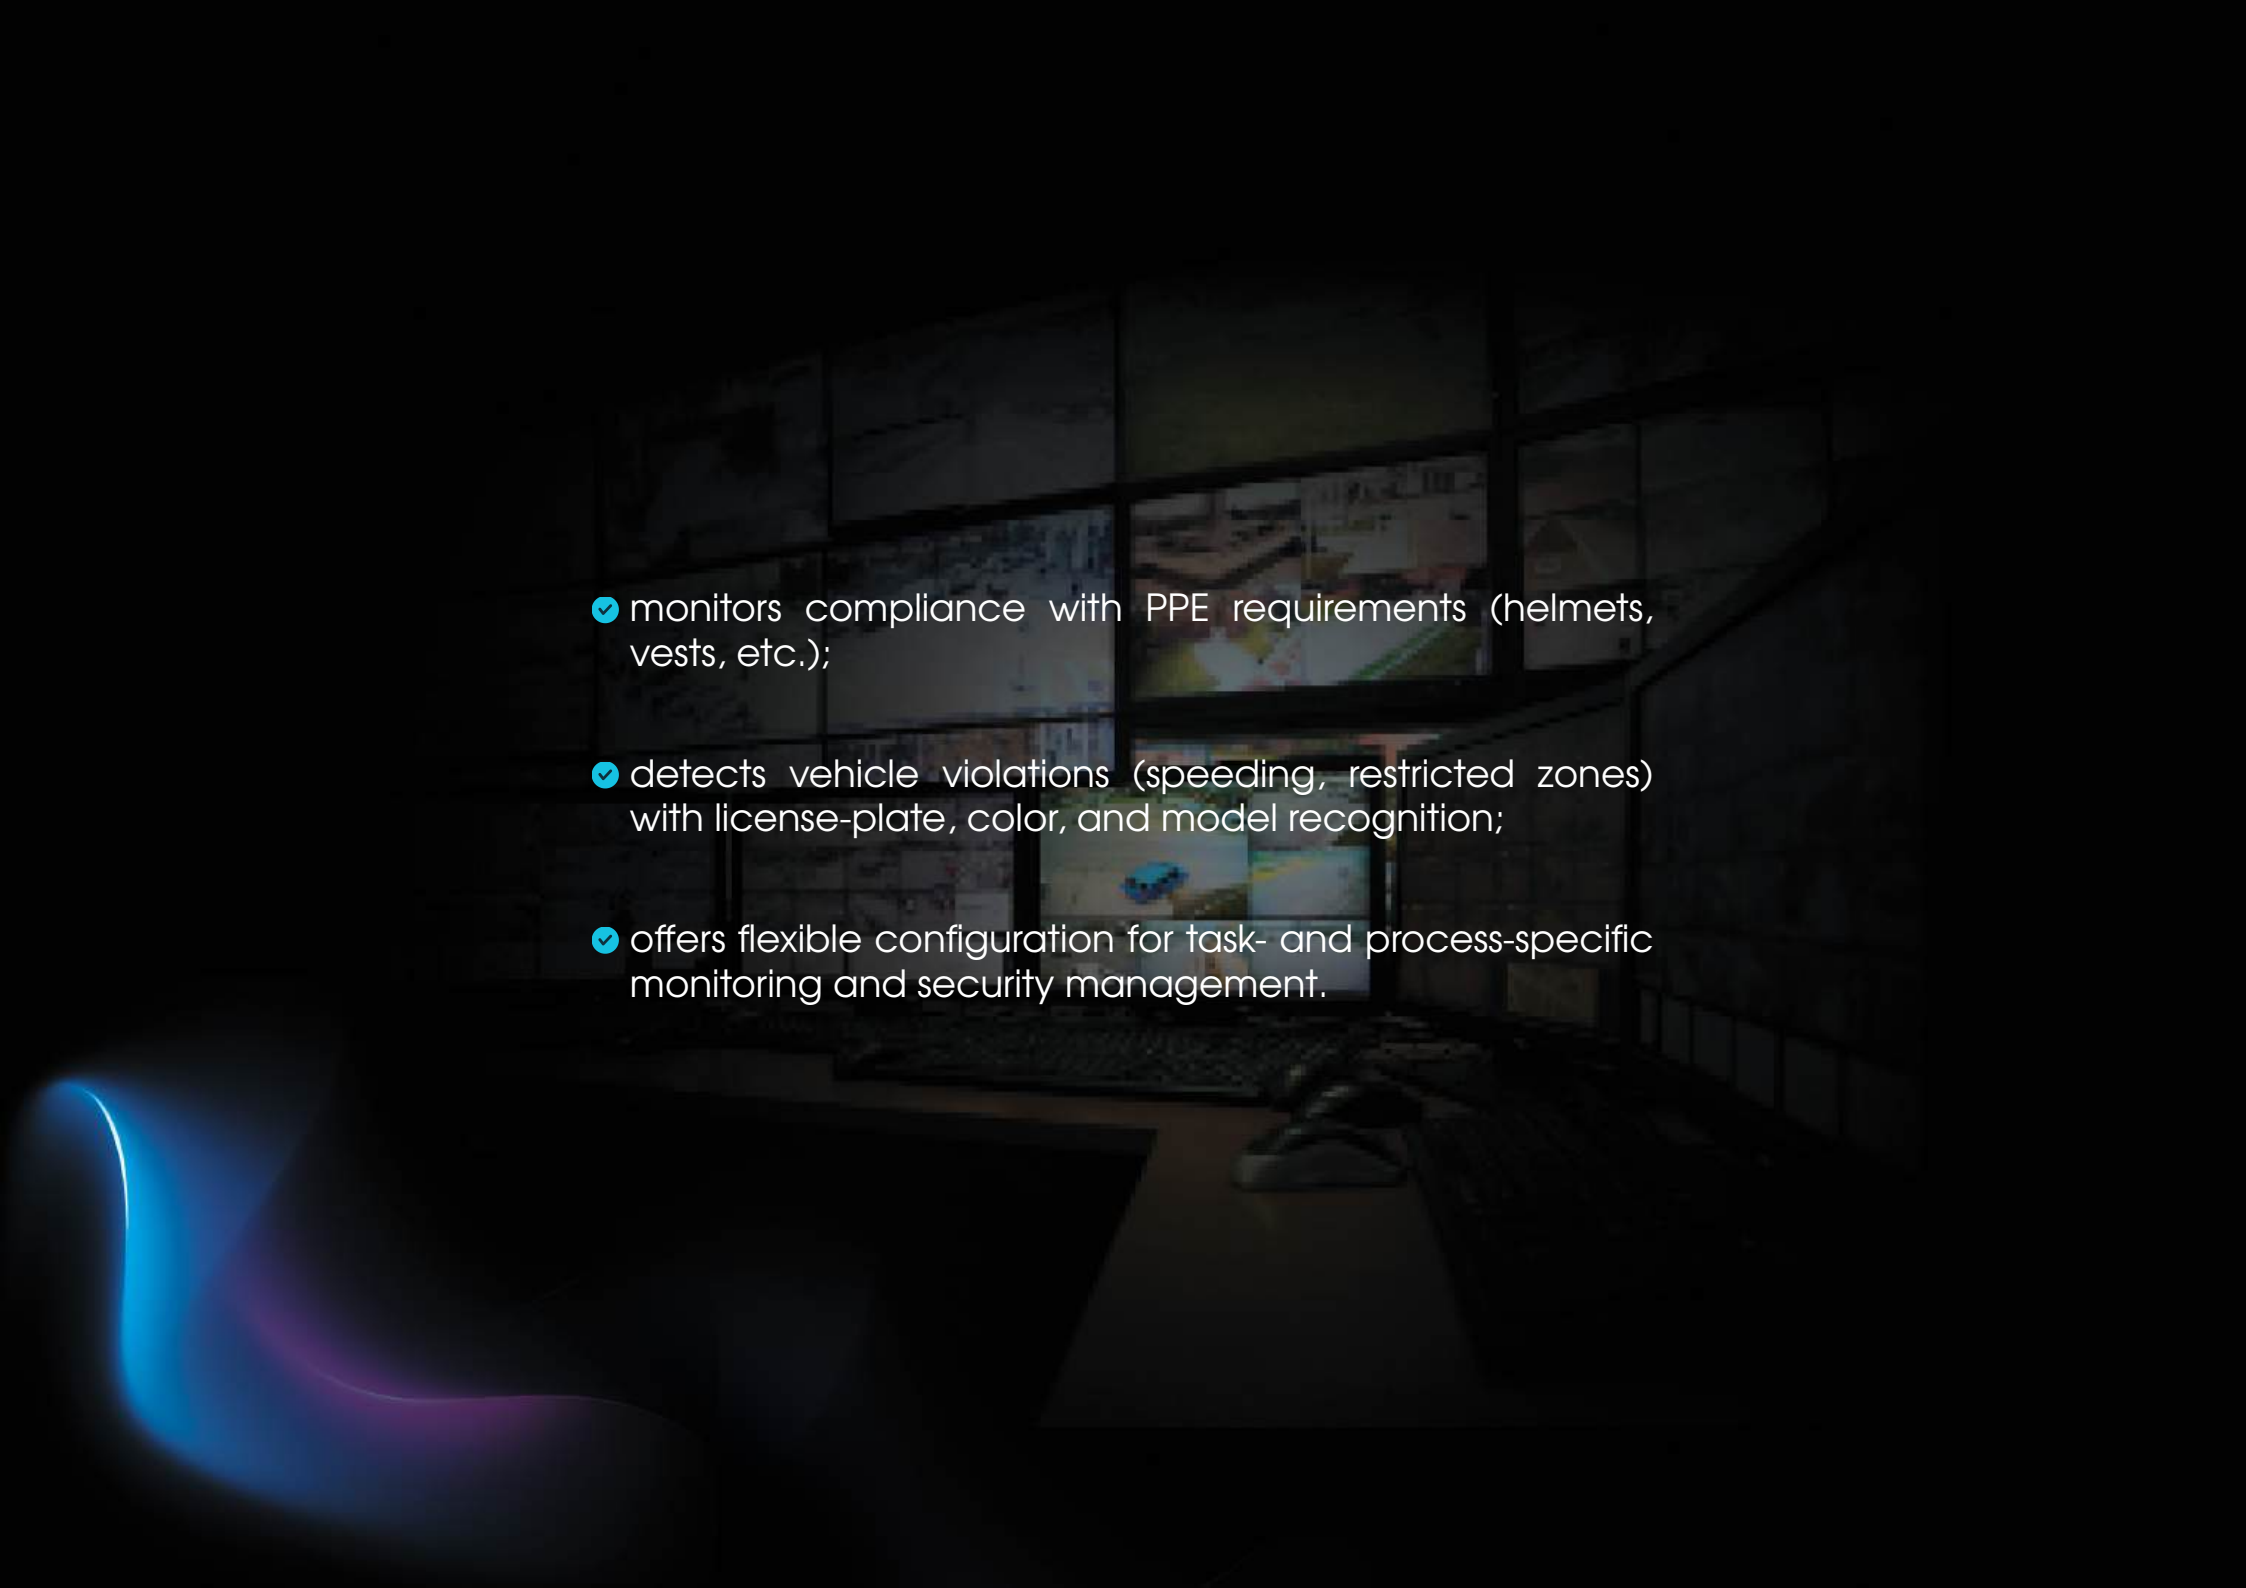

The system's capabilities include adaptation to the needs of the enterprise, creating a safe environment and increasing the overall level of process organization.

Analytics

Gleit significantly enhances security by integrating tools to detect violations and potential risks across the facility:

- ✓ detects suspicious individuals along the perimeter and within the facility;
- ✓ identifies unattended objects on or near the premises;
- ✓ detects smoke, fire, and abnormal temperature increases;
- ✓ alerts on unauthorized crowd gatherings;
- ✓ flags individuals outside designated work zones;

- 
- ✔ monitors compliance with PPE requirements (helmets, vests, etc.);
 - ✔ detects vehicle violations (speeding, restricted zones) with license-plate, color, and model recognition;
 - ✔ offers flexible configuration for task- and process-specific monitoring and security management.

Benefits of Gleit integration

Improved security: enables rapid response to suspicious activities, incidents, and risks, maintaining order;

Cost reduction: minimizes administrative costs and optimizes response-team operations;

Scalability and adaptability: easily scales to enterprise needs, integrates new technologies, and adapts to changing environments;

Training & Customization: when required, we train your subcontractors or in-house staff on our software, and they perform the fine-tuning to meet your specific needs. We can provide any level of **Gleit** customization, and it does not require direct access to sensitive data — this remains with your trusted teams or employees.

Access control.
Security under control.

The logo for Gleit consists of an orange square icon with a white 'G' inside, followed by the word 'leit' in a white, lowercase, sans-serif font. Below the logo, there are two horizontal light trails: a thin blue line and a thicker, curved blue and purple gradient line that sweeps across the bottom of the image.
