ABOUT COMPANY

UKRinfosystems LLC is one of the leading telecommunications companies in Ukraine.

Core areas of activity of the company — system and project integration, IT services and outsourcing, development, implementation, and support of software-hardware and telecommunication solutions, in-house production of computer and server equipment, as well as development of various types of software.

We offer the best technical solutions in the fields of networking, computing, communication technologies, and security systems that meet the highest standards of reliability, manageability, and scalability.

INVERON provides the opportunity to obtain:

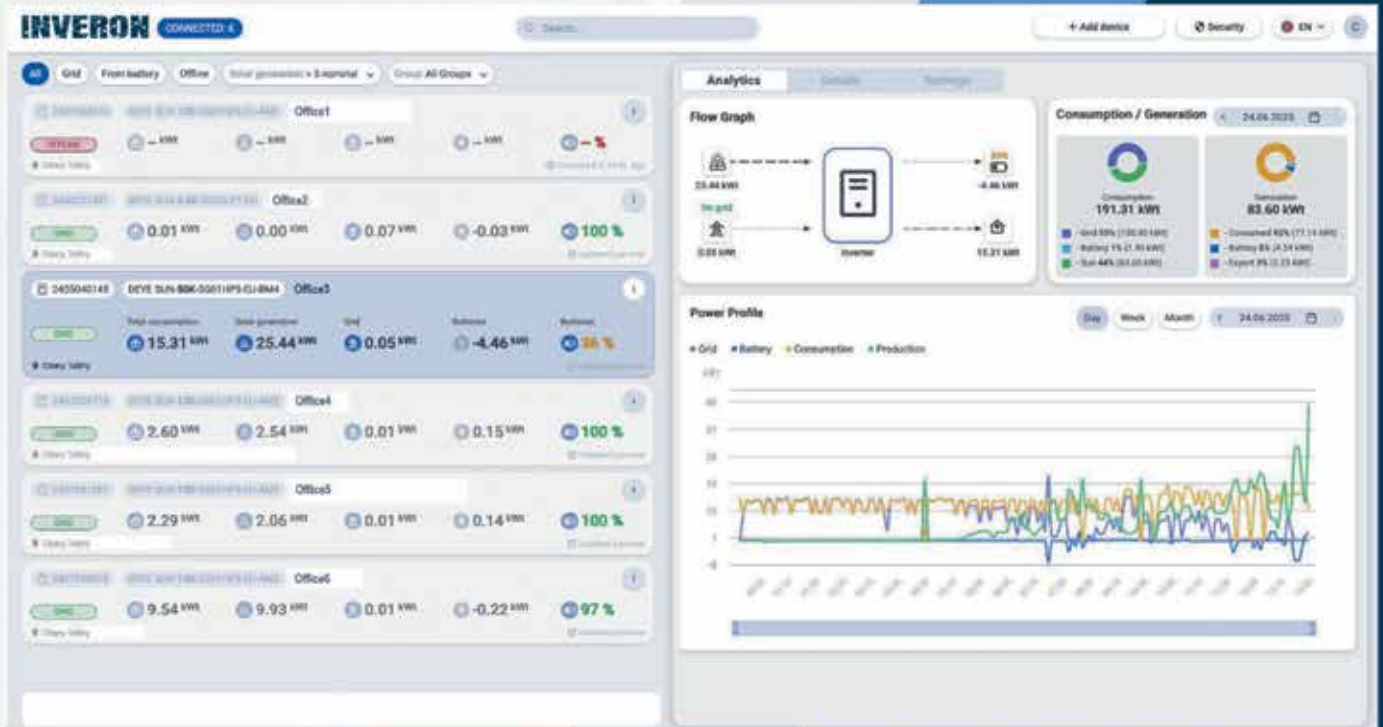

- intelligent process analytics for optimal consumption, use of energy;
- control over all process details, comprehensive information about the operation of each component, functionality management;
- complete transparency of device operation.

With **INVERON**, you can visualize the energy flows of the system – from generation (solar panels) to consumption and storage. Detailed graphs make it possible to analyze energy consumption and production per day / week / month.

INVERON provides access to the current status of all your inverters, supports systems with batteries and generators, providing comprehensive information about their interaction.

INVERON can be deployed in a local corporate network (without data access to the global Internet).

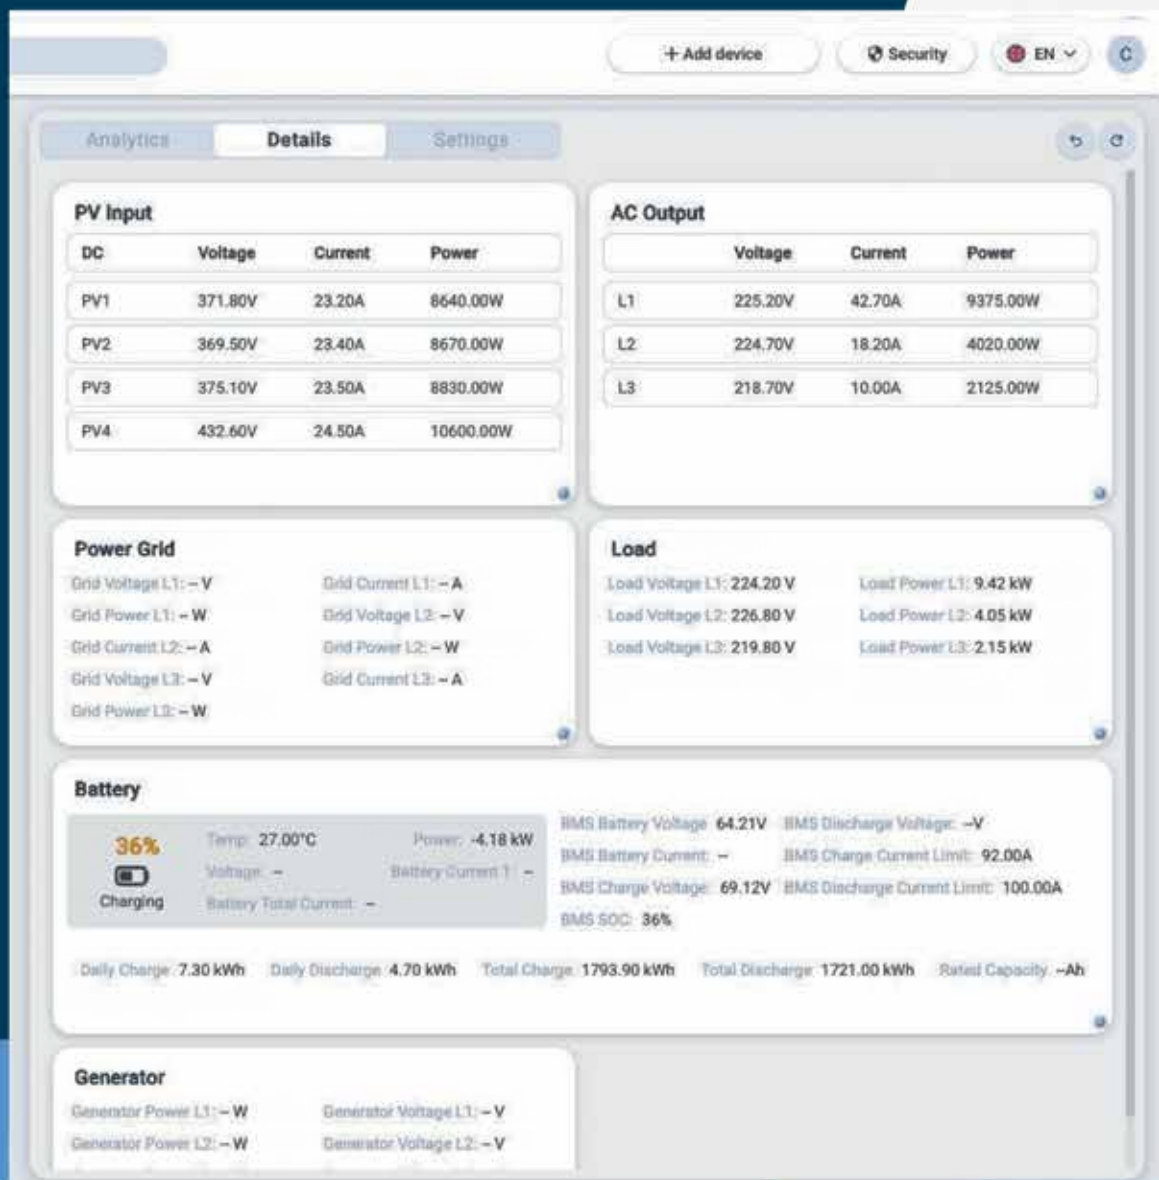

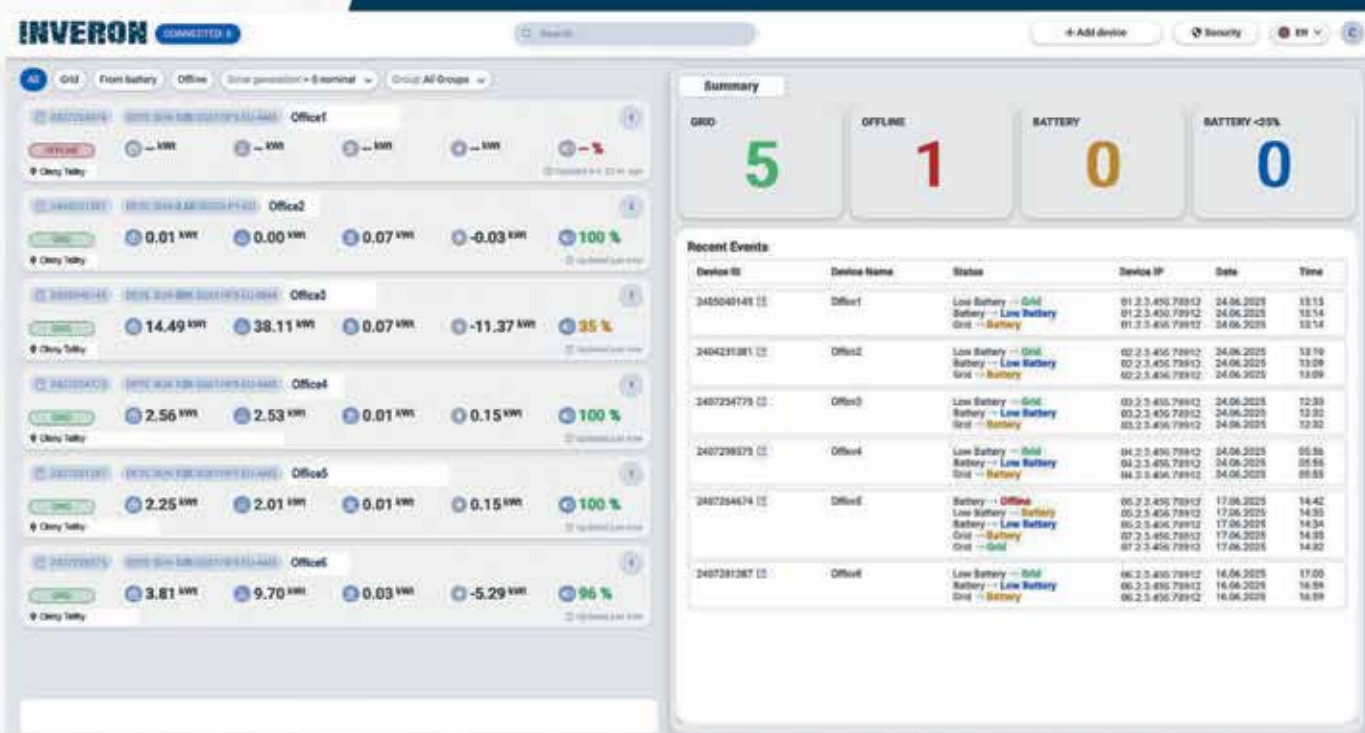

- Intuitive user interface.
- Data relevance. Data updates every 20 seconds.

DETAILS

Real-time energy flows. Electricity storage, consumption, grid feed, battery charge level, load — at a glance.

Alarm notifications for critical status changes, shutdown/recovery notifications.
